1: Cohen E-4,5 (1956-1965) 1967 MS14 Kanuri MS14

[132] The rainfall ranges from twenty-two to twenty-seven inches, in normal years, and is heavier as one moves from north to south. The important point that must be kept sight of is the fact that ninety percent of the rain falls in June, July, August, and September, while the months from October through June are almost totally dry. Indeed even within the four-month rainy season, about eighteen inches of the annual rainfall comes during July and August, so that in exceptionally dry years, June and September can easily turn out to be rainless months.

The various seasons are tied closely to the basic facts of rainfall and latitude. As the rain begins in June the dry sandy soil suddenly comes to life with large stretches of new grass and new leaves on the died-up thorn bushes. From atop one of the Bornu ridges, or from the roof of a house, the entire landscape, as far as the eye can see, starts to change color from yellow-brown to a soft green. The weather cools delightfully, the rains become more frequent, and the short daily storms freshen the air. The people call this period "the rain," and consider it by far the most pleasant time of the year, even though there is extra work for everybody because this is the planting and hoeing season, and there is as well the extra unpleasantness of increased numbers and endless varieties of insects that thrive at this time. After the rains in the months of October and November, and often into mid-December the proximity to the equator produces a short, hot season with clear, still days. In a sense this is autumn. The green of summer fades and the bushland changes to light browns, yellows and grays, except for the ripening millet in the fields, and the evergreen Nim tree. Towards the end of this season the weather cools, and a daily wind from the north to northeast blows in from the Sahara. This is the famous Harmattan that even coats shoreward sides of ships with red dust 100 miles off the coast of West Africa. It starts up about eight o'clock in the morning, to wane by about four in the afternoon, making for relatively cool, still mornings and evenings, with rather harsh, sandy winds, for most of the day, so that one wants to cover face and eyes when riding on horseback, especially into the wind. The people have a special word for this time of year which translates as "winter" but which also means "harvest," since the main crops—millet, guinea corn, and ground-nuts—are harvested towards the end of autumn and beginning of winter. By the end of February or beginning of March the coolness of winter has gone. The Harmattan wind still blows but it gets hotter every day and the nights, although windless and a trifle cooler than the days, begin to approach the daytime temperature. Indeed it is not uncommon for the temperature to remain about 100° F for several weeks on end, so that when a break finally comes, ninety degrees seems like an exuberantly pleasant relief. This is the hot season, called "the heat" locally, and considered by all to be the most unpleasant time of year, which gives even greater sweetness to the cooling rains when they finally arrive in June.

[137] [221] [821] [136] [951] [221] [241] [821]

There are, then, in all, four seasons: the rains from June to September; a short, hot season in October and November; a cooler, windy winter from December to February; and a sharply hot dry period from March to June. Another way of looking at the seasons, also used by the people, and one which will be utilized to some extent in this book, is to simply speak of a dry season, from September to June, and a wet season from mid-June to mid-September. Obviously the contrast between the various seasons of the dry months is not nearly so great as between the rainy months and the rest of the year.

276 302 511 this expenditure from both their own productive activities as well as the husband's allowance. Pagan millet beer, distilled millet liquor, 273 [511] and European beer and spirits are widely consumed. Except for the District Head, who averaged £3.0.0 to £5.0.0 per month for liquor, little is known of this expenditure. It appears that it is a more widespread practice in larger centres and among the younger generation of Kanuri. Indeed it is rare to see an elderly person taking liquor in the 276 pagan quarter of Magumeri. Other minor stimulants are cigarettes, chew- 272 ing tobacco, tamarind juice, soft drinks and candies.

751 789 A different variety of stimulant, which involves almost everyone in some expenditure, is a supernatural or medicinal one, in which the individual expects to be protected against malevolence and [432] misfortune, and to achieve sexual, political and economic success. This type of stimulant comes traditionally from the native doctor or the specialized charm seller, each of whom sells items which stimulate greater success, or stave off failure along some dimension of aspiration. 789 In the culture contact situation, this has created a good market for 177 "patent medicines" which are beginning to appear in large quantities in the urban centre. Thus at Maiduguri, a European drug store sports such items as "Pregno" for pregnant women, "Braino" for students, "Backo" for anyone with back-aches, "Power" for anyone wishing to increase his personal fortunes, and so on. The recognized superiority of Western technology is generalized to its medicinal stimulants and these meet a sharp demand.

302 Cosmetics in Bornu are used by both sexes although more time, money and effort is spent in self-beautification by women. Both men and women use perfume, although only at the upper class level is it a daily practice. Perfume is always passed around at major ceremonies to both
